Duo-Flex Series

Duo-Flex unleashed!

Pacesetter designed Duo-Flex Series to address the issues with switching between conventional, hybrid, and UV inks. Duo-Flex's very unique and innovative compound is specifically designed to address the issues related to switching ink sets as well as deliver performance during the production run.

In independent press tests, Pacesetter once again trounced the competition across the gamut in the usual steller fashion. While the competition struggles with water balance, Duo-Flex Series delivered lower dot gains, higher densities, and exceptional water balance.

In swell tests, Duo-Flex Series shined against the competition. Swell that is uncontrolled will affect print quality, increase downtime, in turn driving costs upward. Duo-Flex Series was designed to help mitigate and minimize the uncontrolled swell that occurs in the hybrid pressroom.

Pacesetter is proud of our Duo-Flex Series compound. We believe in the products that we produce and know that you will be pleased with the results on press. We are here to help anytime. Call with questions or for a quote. Give us a try and see the difference for yourself.
