

DIGITAL PROOFING SOLUTIONS

:SherpaProof

For digital proofing.

:SherpaProof for digital proofing

Agfa has always been in the frontline when it comes to contract quality proofs. You know how important a reliable proof can be. You want to be sure that all parts in the system are appropriately tuned. That is why :SherpaProof has become a reference in the market. It is integrated in the :ApogeeX workflow – making the proof is not the issue. :SherpaProof uses dedicated media, so the quality is not an issue. :ApogeeX has

built-in Color management for color consistency and even more importantly Quality Management, so the consistency of the proofs can be guaranteed. :SherpaProof adheres to many standards for printing such as ISO12646-2 and is certified for Fogra and SWOP.

:SherpaProof uses Epson's ColorBtyleus Pro with K3 inks for hard copy proofs.

Integration of Digital Proofing in the workflow

Now you can achieve high quality, integrated digital proofing - a critical step in any all-digital workflow. :ApogeeX uses the same renderer to output to high-resolution imaging devices as well as for proofing devices and to generate proofs. Production flows with proofing enabled will control the printing of proofs, so they are ready when you need them. Proofing files can be checked on the screen prior to imaging on the proofer. This speeds up the approval cycle.

:SherpaRemote to speed up your throughput

Agfa's :SherpaRemote solution is one of a kind. We understand you are responsible for the proof quality even if these were printed miles away. :SherpaProof guarantees both content and consistency through a simple to use system for remote proofing. Calibration and consistency are controlled from one site, output can be printed in various places.

ColorTune Colour Management

To produce the colour management profiles, Agfa's ColorTune offers the newest technologies. In :ApogeeX the colour management is built-in for color separations and also for spot colours. Most inventive techniques allow us to handle tinted and overlapping spot colours, to a reliable proof using built-in spot colour libraries.

Quality Management

Where colour management gives you the good feeling about colour control, quality management will guarantee the consistency: calibration for consistency from engine to engine and from proof to proof, not related to the distance between the proofes, or the time they were printed.

:SherpaDot screened proofs from digital film

Some applications require proofing of the printed dots. The visual effect of the coarse screens influence the visual interpretation of the printed sample. With :SherpaDot the proof looks even closer to final result.

Optimized Media for reliable proofs

Agfa's :SherpaProof Base is certified by Fogra. It allows you to make :SherpaProofs that are not only a reference to your own printed matter but also adhere to the current specifications for digital proofing.

Agfa also offers single sided and double sided imposition paper.

- single sided :SherpaProof Base
- single sided Premium Paper
- double sided Premium Paper
- water based dye and pigment inks
